Who are we? Where did we come from? Where are we going?

Anthropology, the study of human diversity across geographic space and evolutionary time, takes on these far-reaching questions. Courses in the Department of Anthropology deal with three areas:

- Physical anthropology is concerned with the evolution of human beings as biological organisms and with the physical variation within contemporary human populations.
- Archaeology and prehistory explore the extinct cultures of the past and attempt to elucidate the processes involved in their development.
- Sociocultural anthropology is involved with the comparative analysis of socially learned behavior patterns and institutions of contemporary populations from all areas of the world.

A background in anthropology is a valuable asset in today's job market. The skills you learn as a major are applicable to a wide range of careers. Many of our majors have continued on to graduate studies and have also used their anthropological training to enter fields such as business, law, government, education, international relations, public health, and social and environmental activism.

Archaeology Field School

The department offers a summer program that affords students the opportunity to participate in an actual archaeological excavation. Emphasis is placed on excavation techniques, methods of classification and analysis, and anthropological interpretation.

Anthropology (BA, BS) Program Learning Outcomes

- Demonstrate in-depth, holistic knowledge of the cultures of at least two different geographical areas.
- Be able to apply one or more major anthropological theories of culture and/or approaches to understanding the human condition to empirical anthropological data.
- Be able to apply qualitative and quantitative research skills in one of the anthropological subfields.
- Demonstrate capacity to think across the anthropological subfields represented in the department curriculum.
- Information Literacy (General Education): locate information effectively using appropriate tools; evaluate information with an awareness of authority, validity, and bias; and demonstrate an understanding of the ethical dimensions of information use, creation, and dissemination.
- Critical Thinking and Reasoning (General Education): clearly articulate an issue or problem; identify, analyze, and evaluate ideas, data, and arguments as they occur in one's own or others' work; acknowledge limitations such as perspective and bias; and develop

well-reasoned (logical) arguments to form judgments and/or draw conclusions.

ANT301. Human Evolution. 3 Credits.

This course is designed to introduce students to (1) the fundamentals of evolutionary theory and (2) the application of this framework for our understanding of human evolutionary history. The course will begin by introducing students to the theory of evolution, its historical background and its modern articulation by Charles Darwin. We will also explore modern modifications to Darwinian evolution. From here we will begin to explore the anatomical and phylogenetic context of human evolution by discussing the origin and evolution of primates. Then we will explore the origins of the first hominids and their place in the human family tree. Finally, we will discuss the origins of the genus Homo, the criteria used to differentiate these specimens and the emergence of the modern human suite of anatomical and behavioral characteristics.
